Education

University of Waterloo

Bachelor of Computer Science + Minor in Artificial Intelligence

Expected Apr. 2028

Waterloo, ON

Technical Skills

Languages: TypeScript, Python, Go, C++, Java, C, Rust, SQL, JavaScript, Swift, C#, PHP, Ruby on Rails

Frameworks, Tools, & Libraries: PostgreSQL, REST API, Docker, Unreal Engine, AWS, CI/CD, Node.js, Redis, TensorFlow, PyTorch, FastAPI, Flask, pandas, NumPy, Firebase, MongoDB, Tailwind, Jest, Vite, Three.js, Figma, Linux, Bash, GCP, Datadog, GitLab

Experience

Shopify

Software Engineer

Incoming

Toronto, ON

- Will build and ship **production** software across Shopify's platform, collaborating across disciplines to deliver reliable, high-performance product experiences.
- Will apply software engineering best practices across testing, code review, and observability to improve **performance** and system reliability.

Ford

Software Engineer

Jan. 2026 – Apr. 2026

Toronto, ON

- Owned design of C++ **algorithm** pipelines with Docker for order ingest, eliminating **60%+** of manual operations and shipping high-performance improvements to production.
- Profiled** Linux services end-to-end with Datadog APM including log collection, performance metrics, and alerting for proactive detection of **frame** regressions in production.

Baba

Engineer

Sept. 2025 – Jan. 2026

New York, NY

- Joined as one of the **first engineers**; designed and shipped a Dockerized Python + SQL-driven API-first backend platform for a company that raised **\$6.5M+** at Seed.
- Designed and shipped a care-center platform across **40,000+** facilities, driving **10,000+** sessions through real-time systems and ranking.
- Engineered **real-time** services with C++ and Python APIs, improving throughput and system reliability at scale.

Government of Canada

Software Engineer

May 2025 – Aug. 2025

Toronto, ON

- Built a Python **algorithm** pipeline (NumPy + C++) for climate modeling, improving **spatial resolution 35%** over sensor datasets at national scale.
- Designed a SQL-driven data pipeline processing **40+ years** of records across **50+ stations** and **16 datasets** for CI/CD-driven **performance** testing and quality improvements.

Projects

Cage Fantasy | TypeScript, Swift, C++, PostgreSQL, Kalshi, REST API, iOS

🍏 [app link](#)

- Built the **#1** UFC fantasy **game** on the App Store, achieving **2,000+ users** in **< 2 weeks**
- Solo engineered the **world's first** real-time **game** scoring pipeline, where users adjust picks mid-fight via prediction market analytics.

🏆 **arXivisual** | FastAPI, Modal, TypeScript, Three.js, C++, Docker, PyTorch

🔗 [repo link](#)

- Built an open-source **real-time** rendering platform using RAG + agents to turn arXiv papers into animated videos, reaching **10,000,000+ views** and **100,000+ users**
- Engineered a 4-stage + **7-agent** pipeline on Modal, validating render performance to achieve **~98%** accuracy for production renders.
