Education

University of Waterloo

Sept. 2024 – Apr. 2028

Bachelor of Computer Science

Technical Skills

Languages: Python, Java, TypeScript, C++, Go, C#, SQL, JavaScript, C, Rust, Swift, Kotlin

Frameworks, Tools, & Libraries: AWS, GCP, Azure, Docker, Kubernetes, PostgreSQL, Redis, Kafka, gRPC, REST API, GraphQL, React, Node.js, Next.js, FastAPI, Spring, PyTorch, TensorFlow, pandas, NumPy, Terraform, CI/CD, Git, Linux, Bash, Datadog

Experience

Shopify

Sept. 2026 – Present

Software Engineer

Toronto, ON

- Caught & shipped distributed tax pipeline fix, saving customers **\$1.3M** annually at 10,000+ affected orders/month
- Implemented billing infrastructure across global markets using shadow traffic, cutover controls, and load testing achieving **99.99%+** billing accuracy
- Scaled financial infrastructure supporting **69.5% of US transactions** and 79,700+ annualized filings

Ford

Jan. 2026 – Apr. 2026

Software Engineer

Toronto, ON

- Owned design of C++ algorithm pipelines with Docker for order ingest, eliminating **60%+** of manual operations and shipping high-performance improvements to production.
- Profiled Linux services end-to-end with Datadog APM including log collection, performance metrics, and alerting for proactive detection of frame regressions in production.

Baba

Sept. 2025 – Jan. 2026

Member of Technical Staff

New York, NY

- Joined as one of the **first engineers**; designed and shipped Dockerized Python platforms for a company that raised **\$6.5M+** at Seed.
- Designed and shipped a SOTA care-center platform across **40,000+** facilities, driving **10,000+** sessions through RAG systems and ranking.
- Engineered C++ services and REST APIs, improving throughput and system reliability at scale.

Environment Canada

May 2025 – Aug. 2025

Software Engineer

Toronto, ON

- Built a Python algorithm pipeline (NumPy + C++) for climate modeling, improving spatial resolution 35% over sensor datasets at national scale.
- Designed a SQL-driven data pipeline processing **40+ years** of records across **50+ stations** and **16 datasets** for CI/CD-driven Go testing and quality improvements.

Projects

 **arXivisual** | FastAPI, Python, TypeScript, AWS, Go, Next.js, Modal, Docker

 **repo link**

- Built an open-source FastAPI platform using RAG that converts arXiv papers into animated videos, reaching **10,000,000+ views** and **100,000+ users**
- Engineered a dual-ingestion + 7-agent pipeline on Modal, achieving **98%** parse success across **10,000+** unique papers.

Cage Fantasy | Java, Python, AWS, Go, iOS

 **app link**

- Built the **#1** UFC fantasy app on the App Store, achieving **2,000+ users in < 2 weeks**
- Solo-engineered the **world's first** real-time fantasy mode, where users adjust picks mid-fight via prediction market odds with **<100ms** accuracy .
